

Punch tool datasheet

The punch tools are used to create holes in cardboard for attaching the Invention Engine hub and bits.

There are two tools:

Inner punch tool	Outer punch tool
	
<p>The inner punch tool is used with the stencil to create perforated lines in cardboard that can easily be pushed out. The various Invention Engine bits can then fit through these pushed out sections.</p>	<p>The outer punch tool is used to punch holes for the rivets through cardboard. Use the stencil to create a pattern of indentations, then using the indentations as a guide, punch holes through the cardboard.</p>

⚠ WARNING! SHARP POINTS

The punch tool has a functional sharp point. Contact may result in injury. Handle with care.
